

Features

- Zigbee CCT changeable
- THD <15%
- Output current adjustable via a DIP switch
- Standby power consumption ≤0.5W
- Flicker free
- IP20
- Suitable for Class II light fixtures (panel light, linear light, etc.)
- 5-year warranty (please refer to the warranty condition.)

Applications

· Classroom lighting · indoor office lighting · decorative lighting · commercial lighting · residential lighting

Descriptions

LF-ABZ030-0750-42 is a constant current Zigbee tunable white LED driver with the maximum output power of 30W. Its rated input voltage ranges from 198 to 264Vac and output current can be adjusted via a DIP switch from 600 to 750mA with every 50mA as a step. Besides, it has all-round protections, including over voltage protection and short circuit protection.

Product Model

LF - ABZ 030 - 0750 - 42

- 42: maximum output voltage: 42V
- 0750: maximum output current: 750mA
- 030: rated power: 30W
- ABZ: Zigbee tunable white LED driver series

	Noise Level	≤25dB (this data is measured in a soundproof room and the noise collector should be 10CM away from LED driver)
Testing Equipment	Digital power meter: CHROMA66202, oscilloscope: Tektronix DPO3014, DC electronic load: M9712B, LED board, constant temperature and humidity chamber; Everfine EMS61000-5B: Everfine EMS61000-4A, spectroanalyzer: KH3935, withstanding voltage tester: TH9201B, flicker tester (flicker-free coefficient test) 60N-01, etc.	
Additional Remarks	<ol style="list-style-type: none"> 1. It is recommended that user install the over voltage protection, under voltage protection and surge protection devices in the power supply circuits of light fixtures to ensure electricity safety. 2. The LED driver used in combination with the end device is one of the accessories of the whole light fixture, and the EMC of the whole light fixture is not only susceptible to the driver itself, but to the LED light fixture and the whole light fixture's wiring. Thus, the manufacturer of LED light fixture should re-confirm the EMC of the whole light fixture before the whole light fixture is finished.. 3. The test conditions of the circuit breaker configuration quantity are the same as those of the inrush current. 4. The above parameters are tested at the ambient temperature of 25°C, humidity of 50%, full load, maximum output current and input voltage of 230Vac without any special remarks. 5. Lifud reserves the right to interpret any of the above parameters.

Remark: please disconnect input AC power supply before using the DIP switch function.

■ **Zigbee Net-in & Net-out Operation Instructions**

- The standard of Zigbee 3.0 protocol is used in the design.
- Net-in effective distance: with Tuya wireless gateway, the distance is about 40m; with Tuya wired gateway, the distance is about 30m (measured in a barrier-free condition).
- Control distance: with Tuya wireless gateway, the distance is about 50m; with Tuya wired gateway, the distance is about 30m (measured in a barrier-free condition).
- Quantity of LED drivers that a gateway can match for: 30 (with Tuya wireless gateway and measured in a barrier-free condition)
- Net-in operation:
 - a. connect your phone to Wi-Fi -- turn its location service on -- open the "Tuya Smart" APP.
 - b. gateway adding operation: click "Add Devices" after entering the APP interface -- click "Gateway Central Control" -- select "Wireless Gateway" -- select "Wi-Fi Network" -- the gateway light flashes quickly -- the APP shows "Gateway Central Control" -- click "Successfully Add Gateway" (e.g. wireless gateway adding operation)
 - c. LED driver adding operation: click "Add Devices" at the APP "Gateway Central Control" interface -- click "Lighting" -- select "Light Source" -- the luminaire turns on and off alternately 3 times after the AC input terminal of LED driver is continuously on/off 5 times -- the APP shows Zigbee CCT -- click "Add Drivers".
- When a device that has been connected to the network joins a new gateway, the previous network needs to be disconnected
- Net-in & net-out operation: if the luminaire turns on and off alternately 3 times after the AC input terminal of LED driver is continuously on/off 5 times (within 5 sec), it indicates that net-in or net-out operation is successful, and you can then search for devices again.

■ Zigbee Dimming Operation Instructions

- When the dim-to-off signal of APP is effective, the LED light turns off subsequently.
- Dimming range: 1.5%-100% (@U_o max), dimming frequency: 3.2kHz.
- Output current range: 9-750mA (e.g. 750mA shift)
- Default settings: two-channel out with 50% warm light and 50% cold light; 100% brightness

■ Transportation and Storage

1. Transportation

- Suitable transportation means: vehicles, boats and aeroplanes.
- In transit, it is necessary to prepare awnings for rain or sun protection. Moreover, please keep civilized loading and unloading to prevent the vibration or impact of LED driver as much as possible.

2. Storage

- The storage of LED driver shall conform to the standard of Class I environment. When using LED drivers which have been stored for more than 6 months, please re-test them firstly. Do not use them unless they are tested to be qualified.

Cautions

- Please use Lifud LED driver according to its parameters in the specification, otherwise the LED driver may malfunction.
- Using any incompatible light fixtures or those that have not been certified may cause fire, explosion or other risks.
- Man-made damage is beyond the scope of Lifud warranty service.
