

Features

- Matches radar, light sensor module
- Metal casing
- High performance; high efficiency; high PF
- IP20; suitable for Class I light fixtures
- 5-year warranty (please refer to the warranty condition)

Applications

· Indoor office lighting · decorative lighting · commercial lighting · residential lighting

Descriptions

LF-FMD040PA is a 40W non-isolated PWM dimmable constant current LED driver. Its input voltage ranges from 220 to 240Vac and output current is adjustable from 200 to 350mA via DIP switch with every 50mA as a step. Equipped with 12V AUX output, this driver supports connecting to external smart module.

Test Remark	If there are no special remarks, the above parameters are tested at the ambient temperature of 25°C, humidity of 50%, full load and input voltage of 230Vac/50Hz.	

■ **Electrical Characteristics**

Additional Remarks	<ol style="list-style-type: none"> 1. It is recommended that user install the over voltage protection, under voltage protection and surge protection devices in the power supply circuits of light fixtures to ensure electricity safety. 2. The LED driver used in combination with the end device is one of the accessories of the whole light fixture, and the EMC of the whole light fixture is not only susceptible to the driver itself, but to the LED light fixture and the whole light fixture's wiring. Thus, the manufacturer of LED light fixture should re-confirm the EMC of the whole light fixture before the whole light fixture is finished. 3. The test conditions of the circuit breaker configuration quantity are the same as those of the inrush current. 4. The PC cover, casing and end cap for assembling the LED driver in the light fixture must meet the fire rating of UL94-V0 or above. 5. It is well-advised that the withstanding voltage of LEDs and aluminum substrates >3kV. 6. In the case of input DC voltage, the driver merely suits for emergency situations. 7. It is recommended to install double-pole switch at AC input terminal. If user uses the single-pole switch, make sure to connect it to wire L (live wire), otherwise the afterglow of light fixture would be incurred after the AC is disconnected. 8. There exists stray capacitance between LED light fixture and aluminum substrate, and the light fixture will have transient slight brightness the moment the mains is connected and the aluminum substrate is connected to the earth (the whole light fixture connected to the earth). This is of no abnormalities for a non-isolated LED driver. And if the above issue needs to be avoided, please replace the non-isolated with the isolated.

■ **Dimming Operation Instructions**

Dimming Curve

- Frequency range of PWM signal: 600Hz-2KHz; compatible amplitude: 3.3V, 5V, 12V
- Dimming depth: 3% (@product max. output current)

Dim-to-off “Without Afterglow” Operations

If user needs to enable the dim-to-off without afterglow effect of this driver, please refer to the following operation: when the PWM dimming signal is 0V, the LED driver has no output, whereas there exists junction capacitance between the aluminum substrate’s copper foil and the earth wire, which will make the LEDs glow slightly. Thus, it is necessary to respectively attach a resistor to every node of LEDs in parallel, and the resistance should match the parameters of aluminum substrates and LEDs. (reference resistance: 3-5KΩ/size: 1206)

■ Transportation & Storage

1. Transportation

- Suitable transportation means: vehicles, boats and aeroplanes.
- In transit, it is necessary to prepare awnings for rain or sun protection. Moreover, please keep civilized loading and unloading to prevent the vibration or impact of LED driver as much as possible.

2. Storage

- The storage of LED driver shall conform to the standard of Class I environment. When using LED drivers which have been stored for more than 6 months, please re-test them firstly. Do not use them unless they are tested to be qualified.

Cautions

- Please use Lifud LED driver according to its parameters in the specification, otherwise the LED driver may malfunction.
- Using any incompatible light fixtures or those that have not been certified may cause fire, explosion or other risks.
- Man-made damage is beyond the scope of Lifud warranty service.
